(54) PRODUCTION OF VINYL CHLORIDE RESIN

(57)Abstract:
PURPOSE: To obtain the titled resin excellent in solubility in organic solvents and compatibility with other resins, by copolymerizing a vinyl chloride monomer with a monocarboxylic acid vinyl ester in the presence of a specified epoxy ester resin.
CONSTITUTION: An epoxy ester resin (C) is obtained by reacting an epoxy resin (e.g., epichlorohydrin) with a carboxylic acid (anhydride) and its ester, e.g., saturated aliphatic monocarboxylic acid (anhydride or ester). A monomer mixture of a vinyl chloride monomer (A) with 50wt% or below, based on component A, vinyl ester (B) of a 1W18C monocarboxylic acid is radical-polymerized at 10W80°C in an organic solvent in the presence of 50wt% or below, based on component A, component C and a polymerization initiator.

LEGAL STATUS

[Date of request for examination]
[Date of sending the examiner's decision of rejection]
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
[Date of final disposal for application]
[Patent number]
[Date of registration]
[Number of appeal against examiner's decision of rejection]
[Date of requesting appeal against examiner's decision of rejection]
[Date of extinction of right]
